

Did You Know?

Not only can you search our catalog, but you can compare products side by side before you buy!

NewWaveTech.com Product Comparisons

Searching the NewWaveTech.com catalog for products is easy. There is so much information right here at your fingertips! But did you know that you can actually compare products side by side before you make your decision? Here's how: first, you need to start your search.

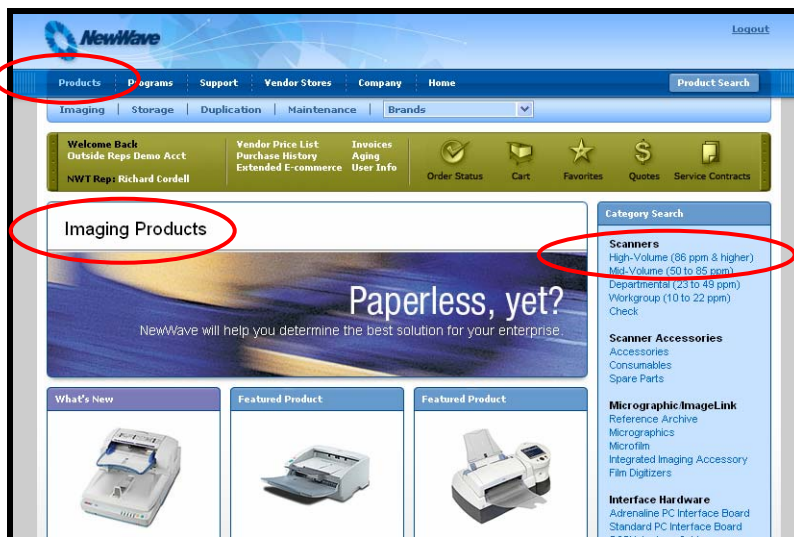

Product Search Tools

There are many ways to search for the products you are looking for.

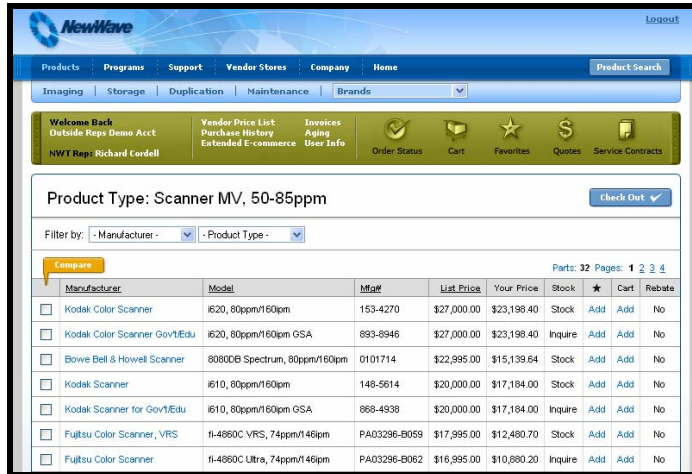

Category Search

Clicking on **Products** in the main title bar changes the 2nd level navigation to the Category listing: Imaging, Duplication, Storage and Maintenance.

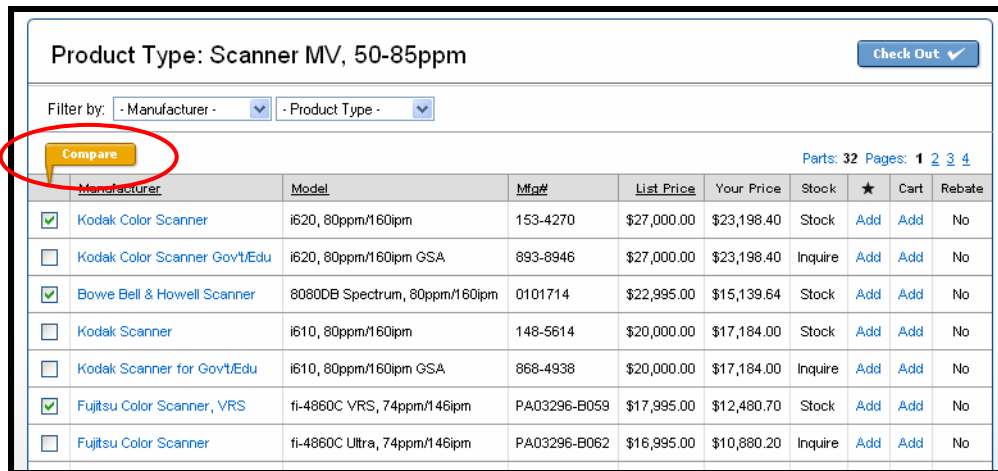

*Note: You **must** be logged in to view this information.*

Simply click on the Category heading. Results will show three featured products, with the blue column on the right hand side of the screen allowing you to drill down even further by subcategory to find what you need. The results screen will show a list of all products containing the criteria you entered.

At this point you can do several things: view product overview page, compare products, add products to your Favorites, or add them directly to your shopping cart. You can select multiple products to compare by clicking in the checkbox in the first column, then clicking the orange **Compare** button.

Your results will show the selected products side by side, so you can compare what they look like, part numbers, how much they cost, if there are any rebates, whether or not the product is in stock, all product specifications, and more. If you want to print the comparison, click the orange **Print View** in the upper right hand corner. If you want to remove one of the products from your comparison view, click the orange **Remove** button underneath the product image.

Print view allows you to print the comparison without any of the frames from the previous screen. If you are comparing more than four products, you can click on the next page number to print those comparisons. Just click File -> Print from your web browser to print the comparison. After printing, click on the blue **Normal View** link to return to the web page.

Overview & Specifications | **Related Products & Accessories** | **Warranty Information**

Designed to handle even extreme applications, the i620 desktop scanner is the obvious choice for mid-range color, grayscale and bitonal applications. The i620 offers incredible image quality, super-fast image processing, reliable paper handling, and the ability to capture all of your documents in bitonal, grayscale, and color at the same speed.

The i620 delivers a powerful combination of price and performance, and brings you a remarkable array of key scanning features, including:

- * Simultaneous output of bitonal and color images
- * Perfect Page with iThresholding delivers sharp, clean images without rescanning
- * SurePath paper handling that minimizes jams
