New Release of Upland's FileBound Extends Content Management Access and Enhances Usability

AUSTIN, Texas (October 27, 2014) – Upland Software, Inc., a leader in cloud-based Enterprise Work Management applications, today announced that the latest version of its FileBound document and workflow automation application is now available. This new release of FileBound further extends content management beyond the enterprise and demonstrates Upland's commitment to delivering a consistent, optimized user experience across its product lines.

FileBound customers benefit by receiving:

- New and enhanced functionality, including secure public access to engage with partners, customers and others outside an organization who impact the flow of work
- User interface (UI) enhancements that make it easy for users inside and outside of an organization to use FileBound with minimal training
- Features that reflect the way users want to work so that document and workflow automation are enabling technologies, not barriers to productivity and adoption
- Optimization and performance tuning that increase responsiveness to achieve maximum productivity

"This year, we've focused on extending the reach of FileBound's enterprise content management capabilities," said Sean Nathaniel, senior vice president of technology at Upland Software and general manager of FileBound. "We've added more options for easy mobile access, more ways to interact with people outside of the enterprise and more usability features to ensure our customers gain maximum value from the application. Our new release of FileBound is the next step in Upland's vision to break down the walls of the enterprise and continually improve the user experience."

More information about FileBound and how it can improve the flow of work for virtually any organization is available at www.filebound.com.
