

Panini First to Market with RDC Solution for Apple Macintosh Users

Market-leading Check Scanners Available for Mac-based Small Businesses

Dayton, OH (February 8, 2011) – Panini, a global payments processing technology provider, is announcing the availability of a Mac interface for their market-leading check scanners designed for remote deposit capture (RDC). The solution is the first to offer native support in the Mac environment along with true MICR capture allowing Mac-based small businesses the ability to capitalize on the many advantages and efficiencies available with RDC.

According to Net Applications, Apple Macintosh market share in the United States has been consistently growing and in October 2010 reached a high of 11.41% of all desktop deployed operating systems. “We are very excited about this segment,” says Michael Pratt, Chief Marketing Officer, Panini. “There are a significant number of Mac-based small businesses and consumers that, until now, haven’t been able to take advantage of RDC, so this initiative has been a priority for Panini.”

Panini’s new Mac interface includes native support in the Mac OS X operating system, is based on Vision API version 3.6 and supports their industry leading check scanning products, Vision X® and I:Deal®. The company’s network of financial services software partners can now offer a RDC solution to this growing segment of small businesses.

“Our customers and partners have been asking for a Mac-supported RDC solution,” adds Pratt. “As the market leader, we took on the responsibility to respond to industry demand.”

Panini is currently involved in many strategic initiatives surrounding these new Mac OS X capabilities and will be making additional announcements, including new customers, partnerships and channels. For more information about Panini’s market-leading check scanners, visit www.panini.com.

About Panini

Founded in Turin, Italy, Panini has enabled clients to capitalize on shifts in the global payments processing market for more than sixty years.
