

PaperStream Capture Pro

Simple and Powerful Front-End Capture

Brochure

Capture. Optimize. Access.

Automating documents is a large part of our daily lives. However, antiquated, costly and complex capture software leads to high inefficiencies and lack of accessible data, that can affect everyday business processes. This sometimes results in loss of revenue, lack of compliance or inefficiency.

PaperStream Capture Pro is a cost effective, high-quality, front-end capture software that efficiently automates documents. It captures, optimizes, extracts data, indexes and releases digitized documents.

PaperStream Capture Pro

- Capture via scan or import
- Easy configuration for quick set-up
- Easy export options to ensure quick archive, search and file retrieval
- Optimized pricing model
- 24/7 industry leading support

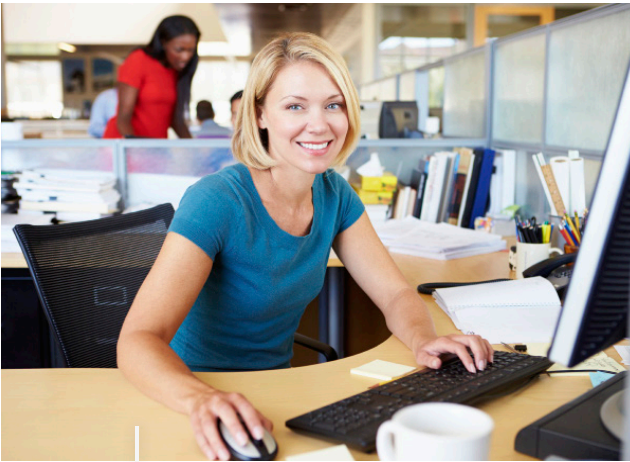

Simple

PaperStream Capture Pro is easy to set-up and displays a user-friendly interface that offers ease of navigation and quick profile set up. Profiles are parameters and guidelines that are set to consume, process, extract and index data so the data becomes useful and valuable to organizations and business processes. PaperStream Capture Pro has predefined templates and flexible data extraction options which require minimal administrative time. Additionally, the software features a user-friendly UI/UX, licensing by station, and connectors are available for release.

Efficient and Cost Effective

PaperStream Capture Pro is offered through a flexible and optimized pricing and license model. The scalable solution is architected for distributed scanning, offering no limits on pages scanned per license and the ability to operate certain phases of the document and data capture lifecycle at differing locations to better optimize productivity. Too often, paper documents are automated and then never recovered, referenced, analyzed for future opportunity or transferred into other processes. The value of the data and the usefulness of the content that was captured were never resourced.

High-Quality Capture, Data Extraction and Indexing

Customers are choosing PaperStream Capture Pro because of its best-in-class image cleanup tool, PaperStream IP. With PaperStream IP, the software radically cleans up images, allowing for more accurate and quick processing of data downstream. Image cleanup is also available throughout other phases of the capture process. Additionally, PaperStream Capture Pro has simple data extraction, indexing, and ease of integration to third party systems, giving organizations the ability to maximize automation, productivity and efficiency throughout the document capture process.

Accessible

PaperStream Capture Pro is available as a Deluxe Bundle offer with the Fujitsu fi Series 7160 scanner, or directly through the Fujitsu Computer Products of America, Inc. (FCPA) website. Visit our website to register for an evaluation, or contact us via email, or telephone.

Industry Leading Support

PaperStream Capture Pro is accompanied by the long standing and industry recognized maintenance program of Fujitsu Computer Product of America, Inc. (FCPA). The PaperStream Capture Pro comprehensive maintenance program includes 24/7 support via online, telephone and email, and includes frequent software updates.
