

Kofax Capture Bundles

The Kofax Capture bundles provide everything you need to capture documents for archiving, retrieval and sharing. The bundles are competitively priced and make it easy to quote and order Kofax Capture—no matter how large or small the system.

Overview of Kofax Capture

Kofax Capture™ scans documents and forms to create digital images, extracting index data for retrieval purposes and delivering the images and associated data to a variety of repositories and applications. This can significantly reduce retrieval costs while improving regulatory and compliance efforts. Kofax Capture is flexible and scalable, enabling customers to define where and how images are captured and indexed, whether in a home office, remote branch or back office data center.

Kofax Capture is for large and medium enterprises with manual, error prone or expensive processes for managing and processing large volumes or high value documents. Market leading and enterprise proven, Kofax Capture provides a flexible, extendible, single vendor framework that enables capture from any source in any location, with capabilities for both centralized and distributed processes. It also forms the foundation for many other Kofax products and solutions.

The Kofax Capture bundles include the Enterprise Version of Kofax Capture, which offers the following additional enterprise capabilities over the Standard Version:

- Enterprise High Availability Bundle (includes a backup license)
- Multiple Instance Support
- Terminal Services & Citrix Support
- WebSphere Support
- Disaster Recovery
- Oracle & DB2 Support
- SNMP Monitoring
