

Subject: KV-S8100 Series New & Improved Feed Rollers

Bulletin Type: Product Marketing Service

Bulletin Number: Document Imaging-2019-PB-128

Date: September 9, 2019

Product: Document Scanners

Panasonic is pleased to introduce its new and improved Feed Rollers for the KV-S8100 series production scanners. The new roller design includes changes to roller material and shape, to achieve maximum performance.

These new feed rollers have been improved to reliably handle a wide variety of media types, while reducing routine cleaning intervals and misfeeds/multi-feeding. The rated roller life will remain the same, however the results of our performance testing has shown these new rollers to consistently operate beyond its rated life.

All KV-S8127 / KV-S8147 scanners produced from August 2019 will include the new and improved feed rollers. In addition, new replacement feed roller kits are now available for current and existing customers.

The new KV-SS100 / KV-SS101 roller kits will replace the existing KV-SS064/KV-SS065 roller kits and will be discontinued once inventory is depleted. Pricing for these new rollers will remain the same.

For actual price and availability of the new KV-SS100 / KV-SS101 roller kits, please contact your preferred Panasonic scanner distributor.
