FileBound by Upland Delivers Powerful Enhancements to Forms and Integrations in New Release

New advanced forms processing and integration tools increase efficiency with robust, multi-application solutions

AUSTIN, Texas, May 31, 2016 /PRNewswire/ -- Upland Software, Inc. (Nasdaq: UPLD), a leader in cloud-based Enterprise Work Management software, today announced the immediate availability of the new FileBound. Customers will benefit from a host of updates and integrations, including advanced forms capabilities, optimized form portal user experience, and improved workflow automation. These new functions significantly reduce common time-consuming tasks and provide simplified workflow and document management.

The new release of FileBound provides improvements in three key areas, including:

- **Advanced Forms capabilities**, enabling usage beyond the connected environment with offline access to Web Forms;

- **Expanded Forms Portal functionality,** providing customizable configurations and unique experiences based upon user roles;

- **Improved Workflow Automation**, supporting complex decision-making with new parallel, multi-routing capabilities.

"The new FileBound moves far beyond simple document automation to support workflow processes and improve efficiencies across an increasingly global workforce," said Jon Eilers, General Manager of FileBound by Upland. "With the new release, we've taken FileBound to the next level to deliver more robust capabilities, reporting, and automation that enables extraordinary outcomes for FileBound users."

Additional features of the new FileBound include:

- **Robust analytics and reporting**, enabling users to quickly compile and visually report data;

- **Connected capabilities**, including integrated authentication, transparent data sharing, and fused integration experiences for image enablement;

- **A**utomated e-signature capabilities, allowing for a more robust and automated experience across a wide variety of applications.
